Pune, India

Software engineer with hands-on experience building Python applications, automated reporting pipelines, and interactive dashboards that turn complex data into clear, actionable insights for stakeholders. Strong foundations in object-oriented programming, modular code design, and SQL (MSSQL, Oracle), applied in a global financial environment through code reviews and GitHub workflows.

EDUCATION

Bachelor of Technology, Computer Science and Engineering

2021 – 2025

Indian Institute of Technology (ISM), Dhanbad

CGPA: 7.57 / 10

Coursework: Data Structures & Algorithms, Database Management Systems, Distributed Systems, Operating Systems, Object-Oriented Programming, Software Engineering, Probability & Stochastic Processes.

WORK EXPERIENCE

Barclays (India)

Aug 2025 – Present

Technology Developer

Pune, India

- Automated recurring database operations with modular, object-oriented **Python** scripts that connect to **Microsoft SQL Server (MSSQL)** using connection strings, replacing manual query execution with reusable, parameterized modules.
- Automated the **data loading process for client-facing applications** using a Python pipeline that validates, transforms, and bulk-loads reference and routing data into MSSQL, with logging and safe re-runs to eliminate manual data-preparation errors.
- Owned end-to-end delivery, as sole engineer, of a payments migration dashboard (Java Spring Boot, Angular) driving a live, zero-downtime enterprise migration of global SWIFT payment processing to the high-throughput IMI-MT framework.
- Built interactive visualizations of end-to-end payment flows and per-BIC distributions, translating complex routing data into clear reporting used by operations and senior stakeholders to track the migration.
- Developed and reviewed secure REST APIs with JWT authentication and Maker-Checker workflows using TDD (H2, Oracle DB), released via GitLab CI/CD, and maintained technical documentation for shared team use.

Barclays (United Kingdom)

Jun 2024 – Aug 2024

Technology Developer Intern

Northampton, United Kingdom

- Developed Java microservices for fraud strategy and analytics, boosting unit test coverage by 10% and testing efficiency by 15% to strengthen risk-management workflows.
- Participated in code reviews and pair programming with senior engineers, contributing to shared codebases and technical documentation to uphold code quality and maintainability.

PROJECTS

• Agentic Financial Due Diligence Pipeline

GitHub

Python, LangGraph, LangChain, RAG Pipeline, Model Context Protocol (FastMCP), Gemini LLM, yfinance

- Built a production-grade, multi-agent Python system using a LangGraph state machine to automate quantitative financial analysis, orchestrating Quant Analyst, Compliance Officer, and Portfolio Manager agents into one reporting workflow.
- Engineered modular analytical tooling exposed over the Model Context Protocol (FastMCP): computed technical indicators (20-day SMA) from live market data and a quantitative 0–100 risk score from regulatory news and SEC filings.
- Implemented a RAG pipeline for retrieval over filings and news, with Human-in-the-Loop approval (LangGraph MemorySaver) to persist state and pause execution for review before the final allocation thesis.

• Distributed Rate Limiter

GitHub

Java 21, Spring Boot 3, Redis, Lua, Docker, JUnit

- Designed a horizontally scalable rate limiter (Token Bucket algorithm), evolving it from a single-JVM service to a distributed system; engineered lock-free concurrency with Compare-And-Swap and atomic Redis Lua scripts to eliminate race conditions under 50+ concurrent threads.

• MedicoBert

GitHub

Python, Flask, Google Cloud Vision API, BioBERT, LLaMA3, OCR

- Built a Python pipeline extracting structured data from handwritten prescriptions using OCR, LLaMA3, and fine-tuned BioBERT, centralizing patient-indexed records for efficient retrieval.

TECHNICAL SKILLS

- Languages:** Python, SQL, Java (17/21), C++, C, JavaScript.
- Python & Analytics:** Object-Oriented Programming, Modular Code Design, Flask, Database Automation Scripting, Automated Reporting Pipelines, Data Visualization & Dashboards.
- AI & LLM Tooling:** LangGraph, LangChain, RAG Pipelines, Model Context Protocol (MCP), AI-Assisted Development Tools.
- Databases:** Microsoft SQL Server (MSSQL), Oracle DB, PostgreSQL, MySQL, Redis, SQL Query Optimization & Indexing.
- Tools & Practices:** Git, GitHub (Code Review), Docker, Kubernetes, GCP, GitLab CI/CD, JUnit, TDD, Linux, Jira; 500+ DSA problems (Graph Theory, DSU).
