Pune, India

Software Engineer specializing in large-scale distributed Java microservices and payments infrastructure. Experienced across the full lifecycle — writing product and system development code, then designing, testing, deploying, and maintaining scalable REST APIs — with strong code reviews, technical documentation, and cloud-native deployments on GCP, Docker, and Kubernetes.

EDUCATION

Bachelor of Technology, Computer Science and Engineering

2021 – 2025

Indian Institute of Technology (ISM), Dhanbad

CGPA: 7.57 / 10

Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Distributed Systems, Database Management Systems, Object-Oriented Programming, Software Engineering, Probability & Stochastic Processes.

WORK EXPERIENCE

Barclays (India)

Aug 2025 – Present

Technology Developer

Pune, India

- Owned end-to-end delivery, as sole engineer, of a Java Spring Boot and Angular payments migration dashboard, driving a live, zero-downtime enterprise migration from legacy SMS messaging to the high-throughput IMI-MT framework for global SWIFT payment processing.
- Designed and modeled the end-to-end SWIFT message-routing domain (BIC, Logical Terminal, HOPS sanctions-screening, Back Office) into a single normalized schema, enabling real-time visualization and tracing of incoming and outgoing ACK/NACK transaction flows at scale.
- Wrote and reviewed production code for secure REST APIs with JWT authentication and Maker-Checker workflows, following a TDD approach (H2 for unit testing, Oracle DB in production) with optimized indexing for production scale.
- Deployed containerized services on OpenShift and automated releases via GitLab CI/CD; maintained technical documentation and reconciled flow-level ACK/NACK data to debug, triage, and resolve discrepancies before production.

Tech Stack: Java, Spring Boot (Microservices), Angular, REST APIs, JWT, OpenShift, Docker, GitLab CI/CD, Oracle SQL, H2, TDD.

Barclays (United Kingdom)

Jun 2024 – Aug 2024

Technology Developer Intern

Northampton, United Kingdom

- Developed Java microservices for fraud strategy and analytics, boosting unit test coverage by 10% and testing efficiency by 15% to strengthen risk-management workflows.
- Streamlined CI/CD automation and infrastructure deployments using Docker, Kubernetes, Jenkins, and OpenShift.
- Participated in code reviews and pair programming with senior engineers, applying feedback on Java best practices and design patterns while contributing to technical documentation to improve code quality and maintainability.

Tech Stack: Java, Microservices, JUnit, Docker, Kubernetes, Jenkins, OpenShift, CI/CD.

PROJECTS

Distributed Rate Limiter

[GitHub](#)

Java 21, Spring Boot 3, Redis, Lua, Docker, JUnit

- Designed a production-grade, horizontally scalable rate limiter using the Token Bucket algorithm, evolving it from a single-JVM service to a distributed system behind a load balancer.
- Engineered lock-free concurrency with Compare-And-Swap (AtomicInteger, ConcurrentHashMap); validated correctness with 50+ concurrent threads via ExecutorService and CountdownLatch.
- Centralized state in Redis and enforced atomicity with Redis Lua scripts, eliminating race conditions across multiple server instances.

Concurrent Restaurant Simulation

[GitHub](#)

C, POSIX Processes, Shared Memory, Semaphores, Mutexes

- Modeled customers, waiters, and chefs as independent OS processes coordinating via shared memory and named POSIX semaphores to safely access shared kitchen and table resources.
- Designed mutex-protected critical sections with strict resource ordering to eliminate race conditions and prevent deadlock under high concurrency.

MedicoBert

[GitHub](#)

Python, Flask, Google Cloud Vision API, BioBERT, LLaMA3, OCR

- Built a pipeline to extract structured medical information from handwritten prescriptions using OCR, LLaMA3, and fine-tuned BioBERT, centralizing patient-indexed records for efficient retrieval.

TECHNICAL SKILLS

- Languages:** Java (17/21), C++, C, Python, JavaScript, Kotlin.
- Backend & Distributed Systems:** Spring Boot, Microservices, REST APIs, Redis, Lua Scripting, Multithreading & Concurrency (CAS), Distributed Systems.
- Cloud & DevOps:** Docker, Kubernetes, GCP, OpenShift, Jenkins, GitLab CI/CD.
- Databases & Testing:** PostgreSQL, Oracle DB, MySQL, jOOQ, JUnit, TDD Methodologies.
- Problem Solving:** 500+ DSA problems solved (specializing in Graph Theory & Disjoint Set Union).
- Tools:** Git, Linux, Jira.
